

"Delivering Military Advantage through multi-national geospatial interoperability"

DGIWG Technical Report

**Cross-reference between STANAG 3675
and DGIWG Symbol Database/Register**

Symbols for use on hardcopy maps and charts

**Edition: 1.0.0
Dated: 28 June 2024**

Document title:	Cross-reference between STANAG 3675 and DGIWG Symbol Database/Register
Document date:	28 June 2024
Edition:	1.0.0
Document type:	Technical Report
Responsible Party:	Defence Geospatial Information Working Group (DGIWG)
Audience:	DGIWG participants and associates
Abstract:	Related to the retirement of STANAG 3675 – ‘Symbols on Land Maps, Aeronautical and Special Naval Charts’. The aim being not to lose any relevant symbology once STANAG 3675 is retired, and to ensure that this symbology is added to the DGIWG Symbol Database.

List of Figures

No table of figures entries found.

i. Executive Summary

This Report includes an assessment of the symbols used for military geospatial products as defined in the existing STANAG 3675 Ed. 2 from 1999. The Report first compares the direction in STANAG 3675 Ed. 2 with the current DGIWG Symbols Database/Register (SD/R) which is used in DGIWG product specifications and standards. Annex A of the Report includes an assessment of all symbols in STANAG 3675 Ed. 2 and identifies whether or not an equivalent symbol exists in the current DGIWG SD/R. The Report will suggest that the direction and symbols in STANAG 3675 Ed. 2 are no longer adequate and encourages a shift towards the symbology in the DGIWG SD/R for fixed scale military geospatial products in order to achieve better consistency and interoperability.

ii. Contributing participants:

Nation	Parent organization
Czech Republic	Geographic Service of the Armed Forces of the Czech Republic, Office of Military Geography and Hydrometeorology
United States	Army Geospatial Centre
United Kingdom	Geospatial Portrayal Standards, UK Strategic Command

iii. Document points of contact

For internal documents use:

All questions regarding this document shall be directed to the editor or the contributors:

v. Future work

No future work is expected in this project.

1 Introduction

NATO has tasked the DGIWG to develop a set of military land and aeronautical geospatial products at set scales. This includes defining the set of symbols that are used for content display on those products.

The set of symbols defined in these product specifications may not align with those that have been previously used in existing standards such as STANAG 3675. STANAG 3675 Ed. 2 was drafted 13 December 1999 and is no longer an accurate reflection of current requirements.

Therefore, an assessment was required in order to validate the symbols defined in STANAG 3675 Ed. 2 with the symbols currently used in DGIWG product specifications. This is to ensure that common symbology is used within NATO, and by NATO Nations, under the NATO Geospatial Information Framework (NGIF) umbrella of standards.

An absence of a common set of symbols for use on hardcopy products could lead to the misunderstanding or misinterpretation of content, and also to an inability for nations to effectively operate together in a multinational environment.

2 Scope

This Report provides a cross-reference comparison between symbols in STANAG 3675 Ed. 2 and in the DGIWG Symbol Database/Register (SD/R).

The body of this Report describes the methodology and elements found within Annex A: Tech Report - STANAG 3675 to DGIWG Portrayal.

Annex A of this Report provides a gap analysis of deviations between symbols listed in STANAG 3675 Ed. 2 and those registered in the SD/R. The SD/R currently serves as the tool for managing symbology for products under DGIWG responsibility. It defines and documents existing common sets of symbols that are utilised to display feature content on hardcopy maps as well as on digital products using a visualisation of vector data in dynamic scale and provided via web services.

This Report is intended to:

- 1) Provide common symbology, and the understanding that goes with it.
- 2) Promote symbol reuse.
- 3) Provide reference for symbology which reflects current requirements, and replaces antiquated NATO references.

4 Terms, Definitions, and Abbreviations

The following abbreviations are used in the document:

AML	Additional Military Layers
DGIWG	Defence Geospatial Information Working Group
DPS	Data Product Specification
ENC	Electronic Navigational Chart
GAWG	Geospatial Aeronautical Working Group

GMWG	Geospatial Maritime Working Group
ICAO	International Civil Aviation Organization
IHO	International Hydrographic Organization
JGSWG	Joint Geospatial Standardization Working Group
PO	Product Object
PTP	DGIWG Portrayal Technical Panel
SD/R	DGIWG Symbol Database/Register
SO	Symbol Object
STANAG	Standardization Agreement

5 Applicability and Use

This document can be used as a source material for a final decision by NATO about the future of STANAG 3675.

6 Methodology

6.1 STANAG 3675

The aim of STANAG 3675 Ed. 2 since it was established in 2001 has been to standardise the basic symbols used on military topographic land maps, aeronautical charts, and special naval charts.

Annex A of STANAG 3675 Ed. 2 provides a list of symbols which are recommended for use to symbolise specific features. It includes a series of thematically grouped tables with four columns entitled: Number, Description, Symbol, and Remarks. The columns have varying levels of detail and types of information.

HYDROGRAPHY			
No.	DESCRIPTION	SYMBOL	REMARKS
101	OPEN WATER (INCLUDES INLAND)		Applicable to all scales. Use with symbol 102.

The direction and basic characteristics for each symbol in STANAG 3675 Ed. 2 includes:

- Provides a general framework for all hardcopy military maps and charts under land, aeronautical and nautical domains.
- Identifies appropriate scale ranges from 1:25,000 – 1:2,000,000. The usage of specific symbols in terms of scale is specified in the column “Remarks”.
- Only general shape and appearance is shown.
- No concrete symbol dimensions are identified. The size, width of line or length of dashes are not included.
- Preferred colours are not specified in detail by any numeric values in colour models, only by general names – Black, Cyan, Brown, Green, etc.
- Usage of a symbol for specific feature types is captured.

6.2 DGIWG Symbol Database/Register (SD/R)

The DGIWG Symbol Database/Register (SD/R) documents and defines symbols and symbol sets which have been identified as appropriate for current DGIWG identified products, and their specifications far (see references in 3.2). These include:

- Web symbology, various scales
- Defence Topographic Map 1:50,000 scale
- Defence City Map 1:10,000 scale
- Defence Joint Operation Graphic (Air) 1:250,000 scale

Moreover, some additional symbols from other sources have been added into the SD/R in connection with the work carried out under this project. This mainly includes aeronautical symbology, where several symbols can represent one feature, as described in Chapter 6.4.

The SD/R contains comprehensive information about Symbol Objects (SO/SOs) and their components and also provides their relationships to other components and objects (e.g. colour, label, font, etc). The relationship between SOs and Product Objects (POs) specifies its usage in a product.

When compared with the STANAG 3675 Ed. 2 symbology, the main characteristics of the SD/R includes:

- More structured and registry-based construct that supports efficient implementation of data product specifications (DPSs) with digitally encoded symbols and drawing rules.
- More specifically product orientated.
- The shape and appearance of symbols is described in detail.
- SOs have their dimensions specified.
- The composition of symbols is specified. Each symbol is composed from point, line, area and colour components.
- Each SO is linked with a specific PO.
- The concept of SOs, and other related objects (label, font, etc), has been implemented.

6.3 Mapping between these two concepts

The DGIWG Portrayal Technical Panel (PTP) made a study comparing the characteristics of symbols in STANAG 3675 Ed. 2 and the current DGIWG SD/R. The result of the comparison is shown in Annex A. For each symbol within STANAG 3675 Ed. 2, one of these actions was taken:

- **Retained as:** a symbol from STANAG 3675 Ed. 2 is still required and has an equivalent (i.e. the same appearance) in the SD/R represented by one or more SOs.
- **Replaced by:** a symbol from STANAG 3675 Ed. 2 will not be used in future, though its replacement is represented by one or more SOs from the SD/R.
- **Retained as label:** the label associated was retained.
- **Replaced by label:** the symbol has been replaced by a label not used in the current edition.
- **Not used:** a symbol from STANAG 3675 Ed. 2 will not be used in future. Furthermore, it is not currently necessary to replace it with a new symbol.

6.4 Cooperation between working groups

Other authorities, and NATO working groups, were consulted regarding the symbol comparisons, including JGSWG, GAWG (for aeronautical symbology), and GMWG (for maritime symbology).

6.4.1 Geospatial Aeronautical Working Group (GAWG)

The GAWG studied the STANAG 3675 Ed. 2 content, focusing on the symbology associated with the aeronautical domain. One of the most important conclusions from their assessment was that several symbols for one feature type (e.g. Vertical Obstructions) have been included in the SD/R for a later application. In this case, symbols were recruited from both the International Civil Aviation Organization (ICAO) symbol set, and from national production.

6.4.2 Geospatial Maritime Working Group (GMWG)

The GMWG has completed a review of the contents of STANAG 3675 Ed. 2 against existing maritime symbology standards (e.g. IHO S-4, IHO S-52, AML). The review identified a number of gaps where STANAG 3675 Ed. 2, in its current form, does not fully reflect symbology used (for hardcopy or digital products) in the maritime domain.

The International Hydrographic Organization (IHO) manages and maintains an authoritative set of maritime symbols, line styles, colours etc within the Portrayal Register of the IHO hosted Geospatial Information Registry. Noting this established register, the GMWG has recommended that maritime symbology standards should be referenced by DGIWG in the development of the SD/R but not duplicated in both registers.

DGIWG and GMWG representatives conducted an initial review to identify symbols used within DGIWG and IHO. This report notes symbols that relate to DGIWG products and those captured within the IHO Portrayal Register or referenced in other maritime symbology standards (e.g. INT1 - symbols and abbreviations used on Paper Charts). This highlights where differences in portrayal exist between domains for the same concept and provides the user a reference to the authoritative maritime symbology standard.

However, to conduct a more comprehensive review would require establishing a liaison channel between the PTP and the GMWG which is out of scope of this project, and would be subject to new requirements submitted to DGIWG.

Annex A

Technical Report

This Technical Report is comprised of individual records for each uniquely identified symbolized feature from STANAG 3675 Ed. 2. Each record is divided into **three sections**, as shown in Figure A-1. The first section, entitled **STANAG 3675 Feature Types and Portrayal**, covers the left half of each record and includes a summary of information extracted from the STANAG 3675 Ed. 2 itself. The second section, entitled **Related DGIWG Portrayal Elements**, is positioned in the upper right section of each record and contains related symbols and portrayal content that is currently included in the SD/R. The lower right section, entitled **Related DGIF Elements**, includes related DGIF elements. Note that the mapping to the related DGIF elements/POs is not complete as some symbols are still being assigned to DGIF Elements.

Figure A-1 Composition of one record of the Technical Report

Table A-1 Description of the record sections

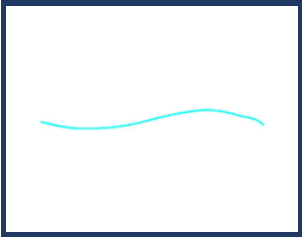

Label	Element Type	Element Description (database field names in bold)
a.	Section Heading	STANAG 3675 Feature Types and Portrayal
b.	ID	Extension of the original STANAG 3675 Ed. 2 table section numbers that provides a unique identifier used for mapping between the original feature types and graphics/symbols from STANAG 3675 Ed. 2.
c.	Description	Feature type name from STANAG 3675 Ed. 2 to be symbolised.
d.	Sub-description	Feature subtype name from STANAG 3675 Ed. 2 to be symbolised.
e.	Symbol Graphic	Symbol graphics were clipped from the original document for reference within the gap analysis / comparison, the quality of the graphics is degraded.
f.	Remarks and Notes	Condensed original information from the remarks section of STANAG 3675 Ed. 2, including scale applicability and remarks and notes.
g.	Thematic Group	Thematic group table heading from STANAG 3675 Ed. 2.
h.	Section Heading	Related DGIWG Portrayal Elements
i.	Action	Indicates what action was taken (i.e. Retained as/Replace by).

j.	Symbol Object ID(s) (SO_ID)	Identification number of the Symbol Object used to represent the original symbol within STANAG 3675 Ed. 2.
k.	Symbol Joins	Defines how more than one symbol applies to the original symbol being portrayed.
l.	Symbol Graphics	Symbol Graphics from the SD/R.
m.	Note	Notes to clarify how STANAG concepts are covered with DGIWG Registered symbol content. This section also includes additional related SO_IDs (if more than three are needed).
n.	IHO Related Artifacts	IHO related standards or registers.
o.	Section Heading	Related DGIF Elements
p.	Product Object	Identification number of the PO (PO_ID) the SO is applied to and camel case name that describes a detailed feature concept, with its associated geometry indicated by the last character (PO_AlphaCode).

VERTICAL OBSTRUCTION

Single / Lighted

SO_0699 or SO_0674 or SO_0693

Scale Applicability Info:
Applicable to all scales.

Remarks and Notes:
1965: elevation of obstruction top above mean sea level(AMSL).
(350) height of obstruction top above ground level (AGL).
